Model Optimization and Tuning Phase

The Model Optimization and Tuning Phase involves refining machine learning models for peak performance. It includes optimized model code, fine-tuning hyperparameters, comparing performance metrics, and justifying the final model selection for enhanced predictive accuracy and efficiency.

Hyperparameter Tuning Documentation (6 Marks):

Model	Tuned Hyperparameters	Optimal Values

Final Model Selection Justification (2 Marks):

Final Model	Reasoning
Random forest Model	<p>Random Forest was selected as the final model due to its high accuracy and robustness, as evidenced by the excellent R-squared value and minimized error metrics. Its ability to handle non-linear relationships and large datasets, coupled with resilience to overfitting, makes it well-suited for complex predictive tasks. Additionally, the model's capability to provide insights into feature importance and its effective performance across diverse conditions further solidify its choice as the optimized model for this project.</p>
